

Omega, the leading innovator for many decades

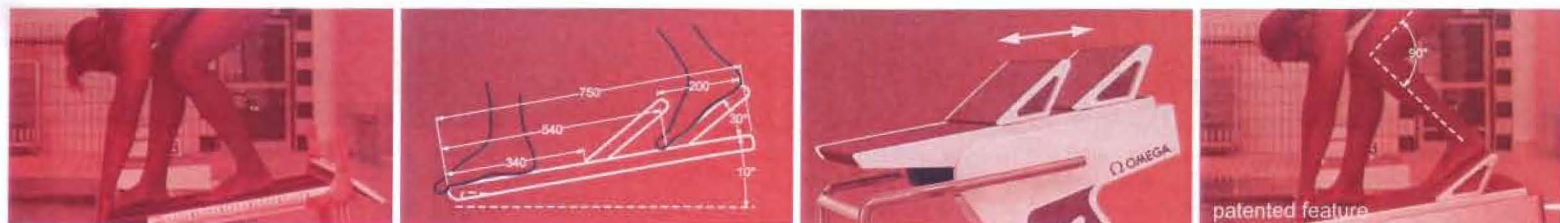

During 2008, a powerful new patented feature will be introduced, revolutionising the way the swimmers will start from their blocks.

Diving from the starting block with the body propelled by the knee at a 90° angle drastically increases the explosiveness of the start. Physical tests undertaken by top level swimmers showed faster races versus a standard block.

Our aim is to let the swimmers benefit from this new feature. The FINA homologation is in progress.

To be updated with the results of the ongoing tests and on the availability of blocks for training purposes, don't hesitate to contact us at: NewStartingBlock@swisstiming.com
